

THE STATE OF THE ART

laboratory refractometer

The LR05 laboratory refractometer has been designed to be accurate, robust, and easy to use. The project has been developed using state-of-the-art technology, which guarantees a high level

of precision and reliability, such as the sapphire prism, the LED long-life light source, and a high-resolution digital optical CCD sensor. The intuitive software interface is available on a wide 6.5 inches touchscreen panel PC which allows easy interface by means of USB ports (Ethernet available).

Benefits

- Robust stainless steel case
- Accuracy based configuration
- Brix, nD and User scales
- Wide range of applications
- No maintenance

The LR05 unit measures the sample refractive index calculating the sample's concentration that may be displayed in different ranges: Brix, nD, % concentration. The LR05 may be delivered in 3 different configurations: Standard, High, and Super Accuracy. All the measurements are automatically temperature compensated: an optional flow cell is available for corrosive products. The main application fields are within industrial laboratories in the food, chemical, pharmaceutical, and textile sectors.
